

# PolyStrip

Concentrated low foaming detergent for high intensity deep cleaning

## Description

**PolyStrip** is a combination of water miscible solvent, a low foaming detergent and water.

## Dilution and Method of Use

**PolyStrip** is supplied in a concentrated form to cater for high intensity deep cleaning and regular cleaning of concrete surfaces. The appropriate concentration for various cleaning requirements must be established by trial.

**PolyStrip** may be applied undiluted for very heavy removal of oil, tyre marks and acrylic or polyvinyl acetate based paints.

Stiff bristle scrubbing brushes or 3M black or brown fibre stripping pads should be used for difficult initial deep cleaning.

Initial dilution of **PolyStrip** with 5 to 6 parts by volume of water should be tried before resorting to higher concentrations or neat **PolyStrip** for initial deep cleaning.

Hand or mechanical scrubbing should be employed to draw dirt into the solution and then the surface should be washed with water and the resultant dirty water mopped or vacuumed off the floor.

To soften encrusted paint spillage, soak the paint with **PolyStrip** and allow about 10 minutes for the product to work. Use paint scrapers and scrubbing pads to remove the paint and then wash with water.

## Mechanical cleaning

**PolyStrip** may be used in mechanical scrubbers at various concentrations, which must be determined by trial for each cleaning requirement.

## Packaging

5 Litres
